DETAILED ACTION

Allowable Subject Matter

1. Claims 1-10 are allowed.
2. The following is an examiner's statement of reasons for allowance: The claims are allowable for at least the following reason.

The cited claims detail steps of determining whether the performance of the other tasks of the maintenance plan can be rescheduled such that the maintenance plan can be completed within the predetermined threshold time, soliciting additional resources from a higher level when at least one resource cannot be rescheduled to execute the other tasks of the maintenance plan within the predetermined threshold time; and allocating additional resources to the level and thereafter rescheduling the at least one resource to include the additional resources allocated to act on a portion of the at least one tasks. None of the prior art of record either teaches this combination or can be combined to teach this combination. U.S. Patent 5,889,956 teaches allocating resources in a hierarchical resource management system by using allowable allocation boundaries. The system teaches each entity having a minimum guaranteed variable and a maximum allowed variable wherein resources are granted to a lower level entity if both entities are not using their maximum allowed resource allocation. The cited teaching does not consider whether a maintenance plan of the tasks is over a predetermined threshold time as disclosed in the claims and therefore does not teach the invention or can be combined with any reference to teach the invention since the patent must use allowable boundaries to determine allocation. U. S. Patents 5,682,530

Art Unit: 2127

and 6,333,936 teach a hierarchical resource management system wherein child resource managers are created and if their parent resource managers have sufficient resources to cover their operations, then those resources are used and if the parent resource managers do not have sufficient resources then the resources of the entire system are determined whether there are in use and allocated accordingly. U.S. Patents 5,682,530 and 6,333,936 also do not consider whether a maintenance plan of the tasks is over a predetermined threshold time in determining whether to allocate the resources as disclosed in the claims and therefore the claims are allowable over the cited references. U.S. Patent 6,351,734 teaches allocating total resources in order to complete a hierarchy project. U.S. Patent 6,351,734 does not consider whether a maintenance plan of the tasks is over a predetermined threshold time in determining whether to allocate the resources of a hierarchy system as disclosed in the claims and therefore the claims are allowable over the cited reference. Therefore, the claims are allowable over the cited prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
